

# INTEGRATED DESIGN ENGINEERING - BACHELOR OF SCIENCE (BSIDE)

Integrated design is a process defined by its use of highly collaborative, multidisciplinary teamwork and consideration of all aspects of an engineering project. The Integrated Design Engineering program (formerly Engineering Plus) provides students with a solid grounding in the fundamentals of engineering and both instills and is structured by integrated design. Our majors customize their degree plans through their choice of one of six engineering emphases (selected from aerospace, architectural, civil, electrical, environmental or mechanical engineering), and a concentration in an approved second area such as entrepreneurship, environmental planning, pre-medical or CU Teach Engineering. At the core of our program are three hands-on iterative design project courses that explore and reinforce engineering principles, which jointly form a continuous experiential thread uniting the four-year IDE curriculum. These team-based projects showcase individual students' growing multidisciplinary knowledge and expertise toward developing vital skills in communication, innovation and leadership, as well as reinforce engineering methodologies required by the emphasis area capstone design experience. Our students graduate with the knowledge, skills and confidence required for success in a diverse and changing world.

Integrated Design Engineering is an approach that favors creativity, diversity and collaboration across disciplines in creating practical and innovative solutions in the service of humanity. Graduates from our program find enriching careers in engineering and related professional fields, establish and support new enterprises, teach secondary-level STEM education and enroll in graduate and professional degree programs.

For more information, visit the program (<https://www.colorado.edu/program/ide/>) website.

## Requirements

### Program Requirements

In order to earn a Bachelor of Science degree in Integrated Design Engineering (IDE), students must complete the curriculum in the undergraduate major program as outlined below. For up-to-date program information, visit the Integrated Design Engineering (<https://www.colorado.edu/program/ide/>) webpage. Required courses in engineering, mathematics and physical science are interwoven throughout the curriculum to provide a multifaceted education. The degree requires coursework in math and science (a minimum of 30 credits), a core of project-based integrated design-focused engineering courses taught by IDE faculty, a disciplinary emphasis (which includes engineering and design content), a selected concentration (<https://www.colorado.edu/program/ide/academics/concentrations/>) (12 or more credits), humanities and social sciences electives (<https://www.colorado.edu/engineering-advising/get-your-degree/degree-requirements/humanities-social-sciences-and-writing-requirements/>), a writing course (<https://www.colorado.edu/engineering-advising/get-your-degree/degree-requirements/humanities-social-sciences-and-writing-requirements/>) and free electives, for a total of 128 credits required for the degree.

### Disciplinary Emphases

Integrated design engineering majors select one disciplinary emphasis (i.e., aerospace, architectural, civil, electrical, environmental or mechanical engineering), and then complete requirements associated with developing competency in that area. To meet graduation requirements, the combination of engineering core and disciplinary emphasis coursework must sum to 52 credits or more. All engineering core and disciplinary emphasis courses require a minimum grade of C-. All integrated design engineering students, regardless of emphasis, are required to take the Fundamentals of Engineering (FE) exam prior to graduation. With the exception of architectural engineering or civil engineering, students are not permitted to double major in a degree program in the same disciplinary area as their IDE emphasis. Students are not permitted to declare a minor in the same disciplinary area as their IDE emphasis.

- Aerospace Emphasis
- Architectural Emphasis
- Civil Emphasis
- Electrical Emphasis
- Environmental Emphasis
- Mechanical Emphasis

### Concentration

The integrated design engineering concentration (minimum 12 credits) allows students to select additional coursework in a chosen field of study, either within or outside of engineering. The concentration course sequence must be a series of courses with increasing specificity or depth within a field, typically culminating in senior-level courses. Most concentrations will consist of at least four 3-credit courses. Every concentration *must* be pre-approved by the Integrated Design Engineering academic advisor *prior* to the commencement of the coursework. All concentration courses require a minimum grade of C-. All IDE majors must declare one approved concentration by the end of their fourth semester and students who transfer into the program after their fourth semester must declare an approved concentration by the end of their first semester in the major. No one is permitted to declare more than one concentration. Visit the program website for the current concentration requirements. (<https://www.colorado.edu/program/ide/academics/concentrations/>)

The Integrated Design Engineering degree is built around student choice and flexibility. The combinations of engineering emphases and available concentrations allow for over 100 possible pathways. The sample curriculum represents only a general idea of what is possible with integrated design engineering. Students are encouraged to visit the Integrated Design Engineering (<https://www.colorado.edu/program/ide/academics/>) website or an advisor for more specifics in planning their own unique pathway and to ensure that all degree requirements are met.

### Prerequisites and Passing Grades

The minimum passing grade for a course that is a prerequisite or corequisite for another required course is a C-. If a grade of D+ or lower is received in a course which is a prerequisite to another, the student may not register for the subsequent course until the first grade has been raised to a C- or higher. If a grade of D+ or lower is received in a course which is a corequisite to another, the course must be repeated until a grade of C- or higher is achieved.

The minimum passing grade for all required engineering core, disciplinary emphasis and concentration courses is a C-. The minimum passing grade for a course that is not specifically a prerequisite or corequisite for another required course is D-, if not otherwise noted above.

### Additional Graduation Requirements

- **FE Exam:** All integrated design engineering students, regardless of emphasis, are required to take the Fundamentals of Engineering (FE) exam prior to graduation.
- **Senior Survey:** All integrated design engineering students, regardless of emphasis, are required to take the Senior Survey prior to graduation.

### Aerospace Emphasis

#### First Year

Fall Semester		Credit Hours
APPM 1350	Calculus 1 for Engineers	4
ASEN 1320	Aerospace Computing and Engineering Applications	4
GEEN 1400	Engineering Projects	3
PHYS 1110	General Physics 1	4
COEN 1830	Special Topics (Engineering First-Year Seminar)	1
<b>Credit Hours</b>		<b>16</b>
<b>Spring Semester</b>		
APPM 1360	Calculus 2 for Engineers	4

MCEN 1024	Chemistry for Energy and Materials Science	3
PHYS 1120	General Physics 2	4
PHYS 1140	Experimental Physics 1	1
Humanities or Social Sciences Elective <sup>1</sup>		2
<b>Credit Hours</b>		<b>14</b>

#### Second Year

##### Fall Semester

APPM 2360	Introduction to Differential Equations with Linear Algebra	4
GEEN 2400	Engineering Projects for the Community	3
GEEN 2851	Statics for Engineers	3
GEEN 3852	Thermodynamics for Engineers	3
Humanities or Social Sciences Elective <sup>1</sup>		3
<b>Credit Hours</b>		<b>16</b>

##### Spring Semester

APPM 2350	Calculus 3 for Engineers	4
ASEN 2403	Dynamics	3
ASEN 2501	Introduction to Astronautics	3
ASEN 2502	Introduction to Aeronautics	3
Humanities or Social Sciences Elective <sup>1</sup>		3
<b>Credit Hours</b>		<b>16</b>

#### Third Year

##### Fall Semester

ASEN 3404	Aerospace Dynamics and Control	3
GEEN 3400	Invention and Innovation	3

- Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts.
- Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives.
- Develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusions.
- Acquire and apply new knowledge as needed, using appropriate learning strategies.

## Additional Information

Students who select the CU Teach Engineering Math or Science Concentration will have a ninth semester student teaching experience. There is financial assistance available for these students.

## Mission Statement

The mission of the Integrated Design Engineering program is to prepare students to be innovators in a wide range of careers, tackling complex global challenges ethically and creatively by integrating technical engineering knowledge with integrated design thinking and multidisciplinary collaboration skills.

## Learning Outcomes

### Program Educational Objectives

Within a few years after graduation, graduates of the Integrated Design Engineering program will have:

- Achieved one or more of the following:
  - established themselves in engineering careers or in a professional field in which they apply their engineering mindset;
  - established themselves as STEM educators; and/or
  - earned or be enrolled in a graduate or professional degree program
- Brought an integrated design mindset to the projects, problems and/or systems they worked on.
- Integrated themselves into teams where they champion inclusive practices and diverse thinking.
- Demonstrated professional and personal leadership through continued learning and growth.
- Advanced in professional standing based on their accomplishments and accumulated additional expertise.
- Contributed to the betterment of society.

### Student Outcomes

Upon graduation, Integrated Design Engineering students are expected to be able to:

- Identify, formulate and solve complex engineering problems by applying principles of engineering, science and mathematics.
- Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors.
- Communicate effectively with a range of audiences.
