General Information
As one of only 36 U.S. public research institutions in the Association for American Universities (AAU), the University of Colorado Boulder is all about realizing the positive impacts of new knowledge. From offering dozens of exciting programs in a range of academic fields, to serving as one of the world’s most dynamic research and innovation hubs, to working closely through hundreds of public outreach efforts with communities across Colorado and the world, we take pride in helping our students, faculty, staff and partners turn new ideas into productive outcomes that change lives.

Students
With an enrollment of more than 35,000 students, CU Boulder is the largest of the four-campus University of Colorado system. The student population comes from every state in the nation and from more than 100 foreign countries. Many different ethnic, religious, academic and social backgrounds are represented, fostering the development of a multicultural academic community that enriches each student’s educational experience.

Faculty
CU Boulder has more than 1,200 tenured and tenure-track faculty, with 98 percent holding doctorates or appropriate terminal degrees. The faculty includes nationally and internationally recognized scholars with many academic honors and awards:

- David Wineland won the 2012 Nobel Prize in physics.
- Several CU Boulder research faculty from the National Snow and Ice Data Center shared the 2007 Nobel Peace Prize with former Vice President Al Gore for their contributions to the international report of the Intergovernmental Panel on Climate Change.
- John Hall won the 2005 Nobel Prize in physics.
- Carl Wieman and Eric Cornell won the 2001 Nobel Prize in physics.
- Tom Cech won the 1989 Nobel Prize in chemistry.
- Eight faculty have received MacArthur Fellowships, the so-called "Genius Grant."
- Twenty-four active or retired faculty are members of the National Academy of Sciences, all of whom are included in the membership of the American Academy of Arts and Sciences.
- Seventeen faculty are members of the National Academy of Engineering.
- Four faculty are members of the National Academy of Education.

Most faculty members, including full professors, teach both undergraduate and graduate classes. Faculty members incorporate their research and creative activities directly into instructional programs. Faculty participate in campus governance through the Faculty Senate and the Faculty Assembly. Students participate through the University of Colorado Student Government (CUSG) and the United Government of Graduate Students (UGGS).

Academic Offerings
The Boulder campus offers approximately 4,000 different courses in approximately 120 distinct fields of study and 235 degree programs across the baccalaureate, master’s, doctoral and professional levels. These courses represent a full range of disciplines in the humanities, the social sciences, the physical and biological sciences, the fine and performing arts, and the professions.

Research
CU Boulder is home to more than 2,000 nationally and internationally recognized research faculty who have earned a global reputation for outstanding teaching, research and creative work across more than 150 academic disciplines. While the classroom is the location for most instructional activities, laboratories, seminars and field work also are important features of the undergraduate and graduate experience. Students can get involved in research and creative work as early as their freshman year.

CU Boulder’s sponsored research portfolio continues to grow. Since fiscal year 2009, CU Boulder has experienced 51 percent growth in research awards. Federal agency funding remains the mainstay of CU research, with 72 percent of awards coming directly from federal agencies. Five federal agencies are consistently the largest funding sources for CU Boulder awards:

- NASA
- National Science Foundation
- Department of Commerce
- National Institutes of Health
- Department of Defense

CU Boulder remains the number one public university recipient of NASA research awards, and continues to be a national leader in aerospace and space research. Additionally, university researchers are expanding their impact through collaborative projects with industry, other universities, nonprofits and international partners.

CU Boulder’s research institutes and research centers significantly contribute to the university’s research and education missions, as well as the regional economy. Research faculty in academic departments, institutes and centers are continually expanding CU Boulder’s research capabilities and collaborations, resulting in new knowledge, technologies and creative work for the benefit of Colorado, the nation and the world.

For more information, see the Research (catalog.colorado.edu/about-cu-boulder/research/) section.

Statutory Mission
CU Boulder’s vision is grounded in its statutory mission as a national public research university. In Colorado statute, the university is defined as the “comprehensive graduate research university with selective admissions standards . . . offer(ing) a comprehensive array of undergraduate, master and doctoral degree programs” of what is now designated the University of Colorado System.

CU Boulder recognizes the exceptional opportunities associated with its role as a research university, and values the unique strength and character research achievements bring to undergraduate education. It is keenly aware of its responsibility for educating the next generation of citizens and leaders, and for fostering the spirit of discovery through research. Indeed, CU Boulder believes that its students, both graduate and undergraduate, benefit from the comprehensive mix of programs and research excellence that characterize a flagship university. Thus, CU Boulder’s statutory mission is relevant today and will remain relevant tomorrow.
Since 2007, CU Boulder’s strategic plan, Flagship 2030, has been guiding near-term actions and investments that will sustain CU’s quality and competitiveness and, through visionary “flagship initiatives,” will transform the university within the next quarter-century.

University of Colorado History
At its first session in 1861, Colorado’s territorial legislature passed an act providing for a university in Boulder. Between 1861 and 1876, Boulder citizens donated land south of town and made gifts from $15 to $1,000 to match the $15,000 the state legislature appropriated for the university’s construction. In 1875, Colorado citizens laid the cornerstone for the university’s first building, Old Main, and officially founded CU in 1876, the same year Colorado joined the union. The university opened its doors the following year with 44 students, a president, and one instructor.

Today, the University of Colorado is a four-campus system that includes the University of Colorado Boulder, the University of Colorado Colorado Springs, the University of Colorado Denver and the University of Colorado Anschutz Medical Campus. The campuses have a combined enrollment of more than 67,000 students. To meet the needs of its students, the university system offers an extensive number of undergraduate, graduate and professional degree programs, as well as opportunities to study abroad, engage in public service and conduct research.

CU Boulder has a strong sponsored research portfolio, and the university also relies on revenues from tuition and fees, contracts and grants, investments and interest income, health services and the generous support of private foundations and donors.

An elected nine-member Board of Regents governs CU and is charged by the state constitution with the general supervision of the university and the exclusive control and direction of all its funds and appropriations, unless otherwise provided by law. The board conducts its business at regular meetings open to the public and through committees. The president is the chief administrative officer and is responsible for providing leadership to the university.

For more information, visit the CU Board of Regents (http://www.cu.edu/regents/) webpage, or the CU System (http://www.cu.edu) website.

Enrollment and Graduation Rates
CU Boulder’s fall 2019 undergraduate enrollment was 29,624 of which 7,113 were entering first-year students. Of these, 49 percent identified as female, 53 percent as residents of Colorado and 28 percent as racially/ethnically diverse (Black/African Americans, Asian Americans, Hispanics/Latinos, American Indians and Pacific Islanders). Forty-five percent enrolled in the College of Arts and Sciences, 24 percent in the new cross-college Program in Exploratory Studies, 13 percent in the College of Engineering and Applied Science, 9 percent in the Leeds School of Business, and 9 percent, combined, enrolled in the College of Media, Communication and Information, the Program in Environmental Design, the College of Music and the School of Education. The number of new undergraduate transfer students who enrolled in fall 2019 was 1,555.

Of the first-year students entering in summer or fall 2013 who enrolled full time, 46 percent graduated within four years; 65 percent graduated within five years; and 69 percent graduated within six years. Of the students who entered in fall 2018, 87 percent returned for their second fall semester.

CU Boulder enrolled 5,904 graduate and professional students in fall 2019. Of these, 43% were females. The five most enrolled majors for masters students were Aerospace Engineering Sciences, Computer Science, Electrical Engineering, Master of Business Administration, and Master of the Environment. The most enrolled doctorate majors were Physics, Aerospace Engineering Sciences, Computer Science, Chemistry and Mechanical Engineering.

CU Boulder Accreditation and Affiliation
CU Boulder is accredited by the Higher Learning Commission (http://www.hlc.org/) (800-621-7440 or 312-263-0456). See individual colleges and schools for program specific accreditation information.

For information on the content of academic programs and official degree designations, refer to the appropriate catalog sections.

As one of 36 U.S. public research institutions belonging to the prestigious Association of American Universities (AAU), a goal at CU Boulder is to directly affect Colorado communities through collaborative research, innovation and entrepreneurship. CU Boulder faculty, staff and students work with the broader community to establish unique connections that have lasting outcomes across Colorado and around the world.

From the Office of the Chancellor (https://www.colorado.edu/chancellor/)
As we enter a new decade facing a new reality with unprecedented challenges, it’s important to reflect on CU’s reach and mission.

We have three imperatives: create tomorrow’s leaders, be the top university for innovation, and positively impact humanity.

That’s why we’re tailoring today’s degrees with tomorrow’s careers. We’re creating a holistic, safe and healthy learning environment. We’re more diverse than ever, with more international partnerships than ever, sparking breakthroughs in almost every field.

And these innovative pursuits don’t stop with faculty. More than 2,000 undergraduate students are directly involved in groundbreaking research. They have studied the relationship between climate and conflict, created software for space exploration and tested the connection between cranial fluids and traumatic brain injury.

Our campus community is working hard to help us get through the COVID-19 pandemic. They are 3D-printing parts of protective face shields for health care workers and developing an affordable over-the-counter test that can tell if someone has coronavirus before they develop symptoms.

Our students, faculty, staff and alumni are Rhodes Scholars, Nobel laureates, business and political leaders, theorists, composers, historians, actors, artists, athletes, scholars, astronauts and authors.

So it’s no surprise that we’re one of the best universities in the world for anything from sustainability and environmental law to aerospace, physics, and of course, innovation.

We do it while adhering to the Colorado Creed: to act with honor, integrity and accountability; to respect the rights of others and accept our differences; and contribute to the greater good of the community.

As a first-generation college graduate who benefits every day from my education, I’m committed to expanding this opportunity for anyone with the will to work for it and the passion to pursue it—wherever their dreams take them.
Be Boulder. And go Buffs!

Sincerely,

Philip P. DiStefano, Chancellor
