MATERIALS SCIENCE AND ENGINEERING (MSEN)

Courses

MSEN 2000 (3) Materials in Technology
Introduces the basic principles of materials science including material properties and function with a focus on the role of materials in technology. Explores the current research and industrial applications of materials in biotechnology, medicine, energy, sustainability, computing, and construction.
Requisites: Requires prerequisite or corequisite courses of CHEM 1201, CHEM 1113, CHEM 1400, ASEN 1022, or MCEN 1024 (minimum grade D-).

MSEN 5000 (1-3) Fundamentals of Materials Science and Engineering
Discusses fundamental topics in materials science and engineering.
Requisites: Restricted to graduate students only.
Grading Basis: Letter Grade

MSEN 5064 (3) Soft Machines
Introduces soft machines as a new paradigm of engineering that starts to impact healthcare, consumer electronics, renewable energy and collaborative robotics. Prepares students to participate in research on soft machines by starting with fundamentals of soft materials and by covering soft robotics, stretchable electronics, energy harvesting and functional polymers. Includes guest lectures, a literature review and a hands-on lab project.

MSEN 5270 (3) Materials Characterization for Engineering
Discusses topics in the experimental techniques used in materials characterization, including the use of X-ray diffraction, optical microscopy, scanning electron microscopy, and transmission electron microscopy. Focuses on the identification and characterization of materials properties and structures.
Requisites: Restricted to graduate students only.
Grading Basis: Letter Grade

MSEN 5370 (3) Materials Thermodynamics and Kinetics
Reviews fundamentals of thermodynamics and kinetics and applies them to understand the chemical, thermal, and mechanical behavior of materials. Examines equations of state, solution theory, equilibrium diagrams, and phase changes. Examines kinetics of phase transformations including theories of diffusion, nucleation and growth, and solidification.
Requisites: Restricted to graduate students only.
Grading Basis: Letter Grade

MSEN 5430 (3) Transmission Electron Microscopy in Materials Science & Engineering
This course provides a comprehensive introduction to transmission electron microscopy (TEM) as a powerful characterization tool in materials science. It is aimed at beginners and intermediate users of TEM and covers both the theoretical and practical aspects of advanced electron microscopy techniques. By taking this course, students will be able to interpret and analyze TEM data and understand electron microscopy publications. Students will learn the necessary theoretical basis for taking practical training on modern aberration-corrected TEMs. Previously offered as a special topics course.
Requisites: Restricted to students with 87-180 credits (Senior, 5th Year Senior) or graduate students only.
Recommended: Prerequisite Experience on electron microscopy is recommended but not necessary.
Grading Basis: Letter Grade

MSEN 5470 (3) Materials Composition and Structure
Examines the composition, structure, and transformations of materials, including phase changes, solidification, and solid-state transformations including theories of diffusion, nucleation and growth, and solidification.

MSEN 5919 (1-5) Special Topics in MSE: Mass Transport
The synthesis, organization, and processing of materials can enable functional performance. Curriculum will overview the synthesis and design of functional organic and inorganic materials. A particular emphasis will be placed on structure-performance correlations between chemistry and materials organization. Topical foci will include polymers, biomaterials, and materials for energy.

MSEN 5840 (1-6) Independent Study
Offers an opportunity for students to do independent work. Subject arranged to fit the needs of the student.
Repeatability: Repeatable for up to 6.00 total credit hours.
Requisites: Restricted to MS and PhD students in the Materials Science and Engineering program (MTEN) only.

MSEN 5919 (1-5) Special Topics in MSE: Mass Transport
Mass Transport Phenomena for Materials & Membranes: Fundamentals of mass transport with particular attention to design problems associated with materials science (reactive 3d printing), electrochemistry and energy systems (fuel cells & batteries), environmental concerns (CO2 capture), and general separations (water desalination). The principles of transport phenomena in material systems, involving multiple components, phases, chemical reaction, and simultaneous momentum, heat and mass transport will be discussed.
Repeatability: Repeatable for up to 10.00 total credit hours. Allows multiple enrollment in term.
Requisites: Restricted to graduate students only.
Grading Basis: Letter Grade

MSEN 6101 (1) Seminar in Materials Science and Engineering
Required of all materials science and engineering PhD students. Student, faculty, and guest presentations and discussions of current research in materials science and engineering.
Recommended: first- and second-year materials science and engineering PhD MSE students.
Grading Basis: Letter Grade
MSEN 6930 (3) Materials Science and Engineering Professional Internship
This class provides a mechanism for MSE graduate students to receive academic credit for internships with industry partners that include an academic component suitable for graduate-level work. Participation in the course will consist of an internship agreement between the student and an industry partner who will employ the student in a role that supports the academic goals of the MSE program and the internship. Instructor participation will include facilitation of the mid-term and final assessments of student performance as well as support for any academic-related issues that may arise during the internship period. May be taken during any term after one semester of coursework in MSE graduate program.
Grading Basis: Letter Grade

MSEN 6950 (1-6) Master’s Thesis
Repeatable: Repeatable for up to 6.00 total credit hours.
Requisites: Restricted to MS students in the Materials Science and Engineering program (MTEN) only.

MSEN 8990 (1-10) Doctoral Dissertation
Doctoral Dissertation hours
Repeatable: Repeatable for up to 30.00 total credit hours.
Requisites: Restricted to PhD students in the Materials Science and Engineering program (MTEN) only.
