ANTHROPOLOGY - DOCTOR OF PHILOSOPHY (PhD)

Departmental Subdisciplines

Anthropology in the United States is traditionally divided into four subdisciplines: archaeology, biological, cultural and linguistic. Of these, the first three are major curricular options available to graduate students in anthropology at CU Boulder.

Archaeology

The archaeology subdiscipline provides continuous geographic coverage of ancient societies from the Plains of North America through the Southwest and Mesoamerica to the Intermediate Area. The native societies range from egalitarian hunter-gatherers through middle range societies to city-states and empires. The faculty’s theoretical and topical interests include human ecology, ethnoarchaeology, community archaeology, agency and social theory, lithic and ceramic analyses, remote sensing and geophysical applications in archaeology.

Archaeology links with biological anthropology in a number of ways. For instance, archaeologists encountering burials frequently turn to biological anthropologists for analyses of stature, health and other topics. Many archaeologists and biological anthropologists share a deep interest in human ecology, the ways people have adapted to their environments and have affected those environments.

Archaeology also relates to cultural anthropology in significant ways, since much archaeological theory is derived from cultural theory. Given the vast diachronic interests of archaeology, significant archaeological theory is also derived independently from ethnography. Ethnoarchaeology spans the two subdisciplines, as archaeologists study the material culture of functioning contemporary societies to learn how better to make inferences about past behavior. Both archaeology and cultural anthropology study ethnic and political groups in contact with each other, including topics of ethnohistory, migration, acculturation, trade and tribute, conquest, information sharing, elite emulation and the rise of multiethnic powers.

Biological Anthropology

Biological anthropology encompasses genetics (the study of gene structure, processes and patterns of inheritance), paleoanthropology (the study of human and primate evolution in the fossil record), osteology (the study of the skeleton), paleopathology (the study of evidence of disease and trauma in skeletal and fossil remains), primatology (the study of the behavior and ecology of nonhuman primates) and human biology (biocultural study of biological variation in living human populations).

The biological anthropology faculty at CU have interests and research strengths that cross sub-disciplinary boundaries and foster collaboration with faculty and graduate students in other disciplines and subdisciplines. We share an interest in human ecology, the broad integrative area of anthropology that focuses on the interactions of culture, biology and the environment. We also share an interest in the processes of globalization, which are rapidly changing many aspects of the modern world. As biological anthropologists, we are well positioned to analyze the impact of globalization on the interaction between biology and behavior, and to analyze human and primate adaptations to changing environments and declining biodiversity.

The department offers training in several different aspects of ecology: general ecology, early hominin paleoecology, nutritional, community and evolutionary ecology. Our research foci also include anthropogenic and climatic effects on primate behavior and biology; conservation biology; primate evolution; feeding biology of humans and non-human primates; biogeochemical techniques for studying the diets and habitats of modern and fossil fauna; life history; endocrinology; growth and development; and maternal and infant health.

We carry out research and offer training and research opportunities at a wide range of international sites, including: Beza Mahafaly, Madagascar; Lajuma Research Centre and the Mokopane Conservation Centre, South Africa; The Cradle of Humankind World Heritage Site, South Africa; 12 museums in South Africa, Kenya and Ethiopia; Keneba, The Gambia; Ta Kau Nature Reserve, Kien Luong Karst area and Khau Ca Forest area, Vietnam. Our laboratories offer analytical capabilities and training in a broad range of methods, from measurement of human energy expenditure, to immunoassay and mid-infrared spectroscopy, to plant nutritional analysis. Our field sites offer training and research on primate health, community ecology, plant-animal interactions, forest ecology, nutritional ecology, conservation biology, dental ecology and paleoecology.

Please note that we do not train students specifically in forensics.

Cultural Anthropology

Cultural anthropologists study the cultural patterns and social institutions that shape how people think and behave in human communities across the globe, including their own society. While their findings are frequently comparative or cross-cultural in scope, cultural anthropologists undertake ethnographic studies through intensive participant-observation in particular cultures, subcultures, communities and regions. The insights of cultural anthropology are derived from ethnographic methods, including long-term fieldwork, interviews, participant-observation and other qualitative research techniques. Among the topical interests of the cultural faculty are gender and sexuality, human ecology, environmental anthropology, medical anthropology, science and technology studies, nationalism and ethnic identity, capitalism and markets, tourism, and history and memory. Areas of regional expertise in the department include Latin America, Native America, Atlantic Canada, South Asia, Southeast Asia, Tibet, East Africa, the Caribbean, Polynesia and Western Europe, as well as their respective diasporas around the world. To learn more about the expertise and current research of the cultural anthropology faculty, please visit the department website, where you will find up-to-date and detailed profiles of each faculty member (https://www.colorado.edu/anthropology/people/faculty).

Requirements

Prerequisites

To be considered for admission to one of the anthropology PhD programs, applicants should have a minimum undergraduate grade point average of 3.00 (4.00 = A) and/or a MA in anthropology or a closely related topic. Graduate Record Examination scores for verbal and quantitative aptitude tests are required. Letters of recommendation and evidence of previous anthropologically oriented experience and work are carefully considered.

Application

Inquiries about application procedures, processes and administration should be directed to the main departmental office. Students who hope
to work with specific faculty members can contact them with questions about advising or research expertise. Applications must be completed and submitted no later than December 1 for international students and January 10 for all other applicants.

Students with no previous graduate work may apply for entrance into the terminal MA program in archaeology or cultural anthropology. Students with no previous graduate work may also apply directly into the PhD program in archaeology, biological anthropology or cultural anthropology. Students who have or will have completed an MA degree in anthropology or an MA or MS in a closely related discipline by the time of their admission may be eligible for transfer credits on a case by case basis.

**Coursework Requirements**

Coursework beyond the MA must include a minimum of 12 credit hours and 30 dissertation credit hours.

**Archaeology Subdiscipline**

The PhD track is for students wishing to earn a PhD who enter the program with a BA, BS, or non-anthropology MA or PhD degrees. The degree requires at least 42 credits of coursework with up to 21 transferable from previous graduate work along with 30 credits of dissertation research. Students entering with a BA, BS, or non-anthropology MA or PhD degrees are required to take ANTH 7840 by their third semester, which will include the completion of a publishable paper and an oral defense of that paper by their PhD committee. Students entering with an MA are exempt from ANTH 7840. Students entering with an MA in Anthropology from CU Boulder can transfer up to 30 credits including any of the required courses listed below.

**Required Courses and Credits**

<table>

Other electives at 5000 level or above, along with 7000 level seminar credits (12 hours)

**Total Credit Hours**

42

**Requirements for students with a graduate degree and 21 hours of credit:**

Quantitative Methods and/or 2-3 designated 5000 level courses

Other electives at 5000 level or above, along with 7000 level seminar credits (12 hours)

**Total Credit Hours**

42

**ANTH 8990** Doctoral Dissertation

**Credit Hours**

30

Note: Any transfer credit or other proposed substitutions for required coursework should be addressed by petition to the Graduate Committee.

**Cultural Anthropology Subdiscipline**

The PhD program in cultural anthropology is open to applicants with undergraduate degrees or graduate degrees. Applicants with an MA in anthropology or an MA or MS in a closely related field who are accepted into the PhD program are eligible for transferring up to 21 coursework credits, to be determined on a case by case basis.

The PhD degree requires at least 42 credits of coursework along with 30 credits of dissertation research. Students entering the program without previous graduate work in anthropology or a closely related field are required to take an independent study with their advisors in their fourth semester, which will include the completion of an approximately 30-page paper that will be evaluated by their committee. After the successful
completion of 30 credits of coursework and a passing evaluation of the fourth-semester paper, students can earn an MA degree as part of their progress in the PhD program.

**Foreign Language Requirement**
Students who will require language training for the successful completion of their dissertation research are expected to identify and begin study of that language, preferably in their first year.
