GEOLOGY - MASTER OF SCIENCE (MS)

This is a research-oriented department affiliated with a number of research institutes and research centers, including the Cooperative Institute for Research in Environmental Sciences (CIRES), the Institute of Arctic and Alpine Research (INSTAAR), the Laboratory for Atmospheric and Space Physics (LASP), the Museum of Natural History, the Center for Astrobiology, and the Energy and Minerals Applied Research Center (EMARC). Related areas of study are geography, astrophysical and planetary sciences, atmospheric and oceanic sciences, chemistry, physics, geophysics, microbiology, ecology, and evolutionary biology. Degree programs for incoming graduate students are individually designed according to research efforts of the faculty. It is highly recommended that students locate a faculty member whose research interests most closely match their own.

For additional details, visit the Geological Sciences website (https://www.colorado.edu/geologicalsciences/academic/graduate-degree-programs/).

Requirements

Admission Requirements
All students applying for admission must take the Graduate Record Examination. Results of this examination are considered during admissions as part of a holistic assessment that includes undergraduate preparation, research interests and letters of recommendation. Each student acquires a primary advisor and an advisory committee that provides guidance throughout the degree program.

Prerequisites
Entering students normally have completed at least 24 credit hours of basic courses in geological sciences and two semesters each of chemistry, physics and calculus. In some cases, undergraduate preparation in other fields of science, mathematics or engineering may substitute for part of the 24 hours in geological sciences.

Program Requirements
Candidates for the master's degree in geological sciences must complete at least 30 hours of graduate credits either with a thesis (Plan I) or without a thesis (Plan II). The only specifically required classroom courses are GEOL 5101 Introduction to Geological Sciences Faculty I and GEOL 5102 , (1 credit each).

A maximum of 6 credit hours may be completed at the 3000- or 4000-level to count toward the 30 hours. A maximum of 9 graduate-level credits may be transferred from another university. Both types of substitution are at the discretion of the student’s principal advisor and the department’s Associate Chair for graduate studies.

Students interested in graduate work in the geological sciences should carefully read the detailed information regarding admission, registration and degree requirements on the department’s Information for Prospective Graduate Students (https://www.colorado.edu/geologicalsciences/academic/prospective-graduate-students/) webpage.

Plan I: Thesis Option
Students must complete a minimum of 4, but no more than 6, credit hours of Master’s Thesis (GEOL 6950) as part of the 30 credit hour requirement.

Plan II: Non-thesis Option
The Department of Geological Sciences typically does not admit students into a Plan II (non-thesis) master’s program, but Plan I or PhD candidates occasionally transfer into this option. Students must complete 3 credit hours of Plan II Master’s Research (GEOL 6960) under the supervision of the student’s advisory committee, as part of the 30 credit hour requirement.
