THE DEPARTMENT'S research areas are categorized into four broad research interest groups:

- economic resources / stratigraphic sciences / paleontology
- geodynamics / geophysics / geochemistry / mineral physics / petrology
- global change / surficial processes / quaternary science
- hydrogeosciences

It is highly recommended that students locate a faculty member whose research interests most closely match their own.

Requirements

Admission & Prerequisites

All students applying for admission must take the Graduate Record Examination. Results of this examination are used both for determining admittance and for initial academic counseling. Each student acquires a primary advisor and an advisory committee that provides guidance throughout the degree program.

Entering students normally have completed at least 24 credit hours of basic courses in geological science and two semesters each of chemistry, physics and calculus. In some cases, exceptional undergraduate preparation in other fields of science, mathematics or engineering may substitute for part of the 24 hours in geological science.

Program Requirements

Candidates for the master's degree in geological sciences must complete at least 30 credit hours of graduate course work either with a thesis (Plan I) or without a thesis (Plan II).

A maximum of 6 credit hours may be completed at the 3000- or 4000-level at the discretion of the associate chair for graduate studies and the principle advisor.

Students interested in graduate work in the geological sciences should carefully read the detailed information regarding admission, registration and degree requirements on the department's Information for Prospective Graduate Students (http://www.colorado.edu/GeolSci/geologygraduatestudents.htm) webpage.

Plan I: Thesis Option

Students must complete at least 24 credit hours at the 5000-level or above, including a minimum of 4, but no more than 6, master's thesis credit hours.

Plan II: Non-thesis Option

Students must complete at least 24 credit hours at the 5000-level or above, including at least 3 credit hours of Plan II Master's Research (GEOL 6960) under the supervision of the advisory committee.
