

ARCHITECTURAL LIGHTING - GRADUATE CERTIFICATE

The architectural lighting certificate is offered to nondegree students from the professional community to help them build their confidence and competence, contribute more fully to their companies and further advance their careers.

Requirements

In order to be admitted to the certificate students must have previously earned a bachelor's degree.

To earn the certificate, students must receive a minimum grade of a B- or higher in each course. The cumulative GPA for certificate courses must be 3.0 or higher.

Depth of understanding and proficiency grows throughout a two-semester online course sequence that begins in September and ends in April, and the certificate program culminates in a capstone course that includes hands-on practical experience with lighting measurements, equipment and software tools during an on-campus week-long intensive as part of a six-week course in July and August. The professional graduate Architectural Lighting certificate is awarded to students who complete this series of three 3-credit courses.

Code	Title	Credit Hours
AREN 5510	Architectural Lighting I	3
AREN 5520	Architectural Lighting II	3
AREN 5530	Architectural Lighting Capstone	3
