

ENGINEERING MANAGEMENT - GRADUATE CERTIFICATE

The engineering management graduate certificate from the Engineering Management Program is ideal for the student who already has a master's degree in a technical discipline, but wants to gain business management skills. Students learn high-level components of finance, accounting, quality management and managing people in a technical or engineering environment. This certificate will help students move into mid-career management positions or excel in their current position.

For more information, visit the program's Engineering Management (<http://www.colorado.edu/emp/engineering-management>) webpage.

Distance Education Option

Students can take individual courses toward a master's degree or graduate certificate through distance education (online). For more information, connect with the individual graduate program directly.

Requirements

This certificate requires 12 credit hours.
