**BIOCHEMISTRY**

The biochemistry major provides interdisciplinary training, education and experience in the chemical and biological sciences. Biochemistry focuses on understanding the chemical processes of living organisms, the reaction pathways that sustain life, the principles of how structure defines function and the physical basis of biomolecular interactions. Students who major in biochemistry are prepared for diverse careers in medicine, scientific research, biotechnology, pharmacy, biomedical consulting, teaching and education, among other professions.

The undergraduate degree in biochemistry emphasizes knowledge and understanding of:

- Foundational principles of biology and chemistry
- The building blocks of life (DNA, RNA and proteins), how they evolved, how they interact, and how organisms make and degrade these building blocks
- How living organisms maintain homeostasis and regulate metabolism
- The molecular mechanisms of how living systems respond to changes, such as environmental perturbations, disease, and chemical therapeutics
- How chemical reactions impact human health

The undergraduate degree in Biochemistry also emphasizes and cultivates development of the following skills:

- Quantitative problem solving
- Critical thinking and analytical reasoning
- Communication of scientific concepts and ideas

Because biochemistry connects to scientific disciplines ranging from genetics, human physiology, microbiology, neuroscience, cell biology, chemistry and geology, biochemistry majors are given the freedom to explore advanced electives in many of these subjects. Additional information about the biochemistry BA can be found on the Biochemistry Department website (https://www.colorado.edu/biochemistry).

Course code for this program is BCHM.
